DETAILSFEATURESCHANGELOG

Microsoft Visual Studio Live Share

Visual Studio Live Share enables you to collaboratively edit and debug with others in real time, regardless what programming languages you're using or app types you're building. It allows you to instantly (and securely) share your current project, and then as needed, share debugging sessions, terminal instances, localhost web apps, and more! Developers that join your sessions receive all of their editor context from your environment (e.g. language services, debugging), which ensures they can start productively collaborating immediately, without needing to clone any repos or install any SDKs.

Additionally, unlike traditional pair programming, Visual Studio Live Share allows developers to work together, while retaining their personal editor preferences (e.g. theme, keybindings), as well as having their own cursor. This allows you to seamlessly transition between following one another, and being able to explore ideas/tasks on your own. In practice, this ability to work together and independently provides a collaboration experience that is potentially more natural for many common use cases.

Activity 1

In this activity, I wrote and practiced programs using C and C++ programming languages.

The programs helped me understand the basics of programming, syntax, and problem-solving.

Collaboration Log

- **Partner Name:** [Pavana]
- **GitHub Username:** [pavana2605]
- **Work Completed:** Collaborated using VS Code Live Share to modify the `hello.c` program by creating a `greet()` function that accepts a person's name and displays a personalized welcome message.
- **Learning Outcome:** Learned how GitLens can be used to view commit history and identify the author of individual lines using Git blame.
